***Location of Application***

1. The location of the subject application has changed. The subject application is now located in Group 1630, Art Unit 1634, and has been assigned to Primary Examiner Bradley L. Sisson.

***Election/Restrictions***

2. Restriction to one of the following inventions is required under 35 U.S.C. 121:
- I. Claims 1-4, drawn to a polypeptide and claim 33, drawn to a related kit, classified in class 503, subclass 350; claim 5, drawn to a pharmaceutical composition, and claim 6, drawn to a vaccine, classified in class 514, subclass 2.
  - II. Claims 8 and 34, drawn to an antibody, and claims 22-28 and 45-51, drawn to a related kit, classified in class 530, subclass 387.1; and claims 9 and 35, drawn to a pharmaceutical composition comprising said antibody, classified in class 514, subclass 1.
  - III. Claim 10, drawn to a method of inhibiting the development of breast cancer in a patient by administration of a polypeptide, classified in class 514, subclass 2.
  - IV. Claims 11 and 36, drawn to a method of inhibiting the development of breast cancer in a patient by administration of antibody, classified in class 514, subclass 1.
  - V. Claims 12-16 and 37-40, drawn to an immuno-based method of determining the presence or absence of breast cancer; and claims 17-21 and 41-44, drawn to an

Art Unit: 1634

immuno-based method of monitoring the progression of breast cancer, classified in class 435, subclass 7.1.

VI. Claims 52-54, drawn to a method for removing tumor cells from a biological sample; claims 55-58, drawn to a method of stimulating and/or expanding T cells specific for mammoglobin; and claims 59-65, drawn to a method for inhibiting the development of breast cancer in a patient by administering T cells, classified in class 514, subclass 2.

VII. Claims 66-69, drawn to a nucleic acid-based method for determining the presence or absence of breast cancer; and claims 70-73, drawn to a nucleic acid-based method for monitoring the progression of breast cancer, classified in class 435, subclass 6.

The inventions are distinct, each from the other because of the following reasons:

3. Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are drawn to different compounds and compositions that have different effects.

4. Inventions III-VII are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are drawn to different methods that are comprised of different method steps and that result in different end products.

Art Unit: 1634

5. Inventions I, III and VI are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP

§ 806.05(h)). In the instant case the product of Group I can be used in the methods of Groups III or VI.

6. Inventions II, IV and V are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP

§ 806.05(h)). In the instant case the product of Group II can be used in the methods of Group IV or of Group V.

7. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

8. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

9. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the

Art Unit: 1634

application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

10. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Bradley L. Sisson whose telephone number is (703) 308-3978.

The examiner can normally be reached on 6:30 a.m. to 5 p.m., Monday through Thursday.

11. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, W. Gary Jones can be reached on (703) 308-1152. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 872-9306 for regular communications and (703) 872-9307 for After Final communications.

12. Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-0196.
